

Is Dirty Data Clogging Your Marketing Engine?

According to Biznology,* B2B data decays at a rate of more than 5% per month or 70.3% per year. In their study, 3.8% of respondents had changed names within 12 months, 65.8% changed titles or job functions, 42.9% changed phone numbers, and so on. In addition, a high percentage of lead records are typically missing information. **According to our clients**, as many as 85% are incomplete as they enter their CRM or marketing automation systems. And, we're all relying on this data to drive marketing success.

So how are you supposed to beat the competition in this race to find and engage with the best leads, when dirty data is slowing your marketing engine – causing you to miss key opportunities and waste time chasing bad leads?

Do what high performance companies do; implement a data management program with InsideView. The sooner you do, the lower the cost.

SCHEDULE A DEEP CLEANING

Enlist InsideView to do a one-time deep cleaning and enrichment of your existing database. Give us the file and we'll do all the work. We'll find and fix inaccuracies, identify duplicate records, and add up to 40+ fields of missing information.

PUT YOUR RECORDS UNDER MANAGEMENT

Once your data is clean, you'll want to keep it clean to maintain your engine's performance. InsideView makes it easy to enrich new data as it enters your system and regularly refresh it to keep it from getting stale. Ask about **Enrich**, Refresh for Salesforce, or our simple REST-based **APIs** that empower you to build customized routines to enrich and refresh your data.

THE MULTIPLYING COST OF DIRTY DATA

The longer incorrect records remain in the database, the more expensive it becomes to deal with them. In data management circles, this point is illustrated by the **1-10-100 rule**: It takes **\$1** to verify a record as it is entered, **\$10** to cleanse and de-dupe it, and **\$100** if nothing is done, due to lost opportunities and wasted resources

LIST CLEAN SERVICES

You Provide

1. A .CSV file containing the information below. To aid in matching records, the file should include as many of these fields as possible. (Either company name or website is required.)

- Company name
- Website
- State
- Zip
- Street
- Country
- City
- Phone

Insideview Delivers

1. A .CSV file with the following data (where available) for companies we are able to match in our database.

- InsideView ID
- Company Name
- Revenue (USD)
- Employees
- Ownership
- Ticker Symbol
- Description
- FYE
- Industry
- NAICS
- SIC (US)
- Street
- City
- State
- Postal Code
- Country
- Phone
- Fax
- Website
- Parent ID
- Parent Name
- Ultimate Parent ID
- Ultimate Parent Name
- EFX ID

2. A Data Insights Report breaking down key attributes of the companies found in our database. (Other company fields are also available. Speak to an InsideView data expert for details.)

CHOOSE THE DATA PLATFORM YOU CAN TRUST

Of course your cleaning routine is only as good as the quality of the data you use to refresh your database. So how do you choose the best data provider?

We recommend you choose the provider with the most reliable methodology, highest accuracy ratings, and proven leadership. Let's see how InsideView stacks up.

InsideView employs a proprietary “MTV” methodology to gather, analyze, and validate data.

M Multi-sourced. InsideView gathers data from multiple sources – more than 40,000 editorial, news, financial, and social sources – including world-class vendors such as Thomson-Reuters, CapIQ, and Equifax. Of equal importance, we employ multiple data creation and gathering methodologies, unlike a number of commercial data providers. This matters because each methodology has strengths and weaknesses. For example, crowd-sourcing produces a large volume of data, but the data tends to have a high percentage of duplicate and stale records.

T Triangulated. Triangulation is at the heart of InsideView’s algorithmic technology, which also takes advantage of machine intelligence and text analysis to validate and make sense of diverse and conflicting information. Simply put, our data scientists teach computers to “think” like humans – to take bits of structured and unstructured data, see the relationships between the bits, understand their meaning, and convert the result to useful information. Once “taught,” the computers can process massive amounts of data with human-like logic at infinitely faster speeds. Which is necessary in a world where Big Data is getting bigger every second. And the rate at which it changes is growing even faster.

The essential premise of triangulation is that consensus among multiple sources is the best indicator of truth. The broader the agreement, and better the source, the more reliable the data. We pull data from thousands of sources, not simply to amass enormous amounts of data, but to triangulate each point to determine its validity and usefulness.

V Validated. Triangulation is our primary means of validating data, as the most reliable way to automatically and continuously authenticate large volumes of data at scale. It’s the reason our contact data is up to **20% more accurate** than that of other data providers. Then we go one step better, providing an easy mechanism for users to flag and correct inaccurate data points, which our editorial staff verifies before updating the official record.

A History of Technology Leadership

InsideView started delivering intelligent B2B data nearly a decade ago. When others were relying on a single source of data, InsideView gathered data from multiple sources. While others relied on human editorial teams to validate data, we developed algorithms to validate data with human-like logic, at speeds humans could never touch.

Our contact data is up to **20% more accurate** than that of other data providers.

Today, others talk about having thousands of sources and using triangulation. We were there years ago and we continue to lead the way with patents pending on several innovations.... while others work to catch up.

START WITH A FREE DATA DIAGNOSIS

Doing data right requires a serious commitment, so it’s important to know how serious your problem is. We make it easy to find out with a free self-service Data Diagnostic that offers an intuitive interface and returns results in minutes.

Visit www.insideview.com/solutions/data-diagnostics to see how your data measures up. Then contact us to start cleaning the fuel in your marketing engine.
